THE FIRST IMAGES OF LEVIATHAN IN OPERATION REVEAL HER HUMAN-CENTERED PHILOSOPHY IN PRACTICE

Oceanco has released the first images of *Leviathan* since her delivery in November 2025. Captured by renowned photographer Guillaume Plisson in the Bahamas, the gallery offers a glimpse of the yacht's unconventional interior and onboard experience.

Marking a departure from a traditional yacht shoot, the imagery places a strong emphasis on people and how the yacht is used, reinforcing the community-driven environment at the heart of the design.

"*Leviathan* represents a new philosophy of yachting – one that places greater purpose at the heart of design, ownership and operations," says Deniz de Koningh, Project Director at Oceanco. "The owner's vision sets a forward-thinking example of how yachts can be built and used with intent. We are excited to see the influence she may have in shaping the future of the industry."

This is most evident in an interior layout conceived to dissolve traditional hierarchies between guest and crew spaces. What would traditionally be the main saloon, for example, has been reimagined as a large communal dining space, while recreational areas such as the gaming lounge, basketball court and sun deck are designed for shared use.

For interior designer Mark Berryman Design, the project broke new ground. "*Leviathan* challenged convention in a completely new and exciting way from an operational standpoint," says Mark Berryman.

The imagery also reflects the crew-centric approach behind many of the material choices. Low-maintenance solutions are seen across the yacht, including custom Bolidt decking, bead-blasted stainless steel railings, synthetic handrails and an off-white exterior finish, to support durability and ease of upkeep.

"The goal was to consider where the most valuable experiences occur for the community of people onboard," says owner Gabe Newell. "By increasing crew productivity, we can enable them to focus more on engaging with guests and creating meaningful experiences for everyone."

The photos also feature *Leviathan's* fully equipped dive center, highlighting her capabilities as part of Inkfish, an organization supporting scientific research and marine exploration across Gabe's fleet.

A glass panel engraved with the names of nearly 3,000 people involved in *Leviathan's* build appears within the main staircase. This tribute recognizes the collaboration that made this landmark project possible, including Oceanco, YTMC, Y.CO, Mark Berryman Design, the *Leviathan* crew and a network of Co-makers and partners.

MAIN CHARATERISTICS

Length	111m / 364ft
Beam overall	17.7m / 58ft
Gross tonnage	4,970GT
Exterior design	Oceanco
Interior design	Mark Berryman Design
Naval architecture	Oceanco & Lateral Naval Architects
Owner representative	Y.CO & YTMC
Builder	Oceanco
Propulsion type	Diesel-Electric
Top speed	17.5 knots
Cruising speed	13 knots
